

Ans 1. (c) New Delhi

Ans 2. (b) Soil

Ans 3. True

Ans 4. Asia

Ans 5. Levels of Government :
→ Central Government
→ State Government
→ Local Government

Ans 6. Democracy is a form of government in which people choose their leaders by voting.

Two features of democracy:

- Citizens have the right to vote.
- Everyone is equal under the law.

Ans 7. Four uses of rivers :

- Drinking water
- Irrigation of crops
- Transportation
- Generation of electricity

Rivers are important because they provide water, support farming, and help in transportation and power generation.

Ans 8. Natural resources are resources that occur in nature and are useful to humans. Examples include water, air, soil, forests, sunlight, and minerals.

These resources are important because they provide food, water, energy, shelter, and raw materials. Farmers use soil and water to grow crops, while industries use minerals and forests for production.

Overuse of resources can cause deforestation, pollution, water shortages, loss of wildlife habitats, and environmental damage.

Students and citizens can help by saving water, planting trees, recycling waste, reducing pollution, conserving electricity, and using public transport.

Therefore, natural resources should be used wisely so that future ~~gen~~ generations can also benefit from them.
